The Impacts of High-Intensity Streetlights on Academic Outcomes: Evidence from a Crime Deterrence Experiment

with Amy E. Schwartz

Governments increasingly deploy place-based interventions to reduce crime, but their consequences for the residents who live with them, including children, are rarely evaluated beyond crime itself. In 2016, the New York Police Department randomly assigned high-intensity streetlights – each emitting 600,000 lumens, four times the brightness of Yankee Stadium’s lights – to high-crime public housing developments. Linking the experiment to administrative records of New York City public school students, we find that although exposure to nighttime and daytime index crime, arrests, and incidents involving underage victims fell substantially in high-dose developments, achievement did not improve on average. This null masks two offsetting patterns. Students in high-rise buildings – on average farther from the street-level lights – gained 0.11 standard deviations in math and 0.10 in reading, while students in low-rise buildings, closer to the lights, lost 0.22 standard deviations in math, a difference of 0.33 standard deviations. A series of tests supports a residential light-exposure explanation. Students living just outside high-dose developments show no corresponding achievement gradient by building height, and low-rise and high-rise students face similar safety environments. Instead, consistent with sleep disruption, the losses concentrate among girls at puberty-relevant ages and in math rather than reading, and are moderately larger where nighttime noise is high. Differences in post-treatment school mobility and school quality may also account for part of the achievement gradient. We show that a policy can therefore reduce crime while imposing academic costs on the children living closest to it, making its net effect depend on intensity and on how the built environment allocates exposure.

RESEARCH AND PROFESSIONAL EXPERIENCE

Graduate Research Associate, Center for Policy Research

2022 –

Professors Michah W. Rothbart and Amy E. Schwartz

Research Assistant, Center for Competitiveness Studies

2019 – 2022

Professor Guillermo Abdel Musik, ITAM

Investment Consultant, Profuturo Pensiones

2018 – 2019

TEACHING

Syracuse University (Graduate-level)

Quantitative Analysis

Spring 2024, Spring 2025

Public Budgeting

Fall 2022, Summer 2023,
Summer 2024

Guest Lecturer: Education Policy, Quantitative Analysis

Spring 2025

PRESENTATIONS

Upcoming: Urban Economics Association (UEA); NYU Furman Center; Southern Economics Association (SEA);

2026: American Real Estate and Urban Economics Association (AREUEA); FLX Economics of Education Workshop; Capital District Applied Microeconomics Workshop; Association for Education Finance and Policy (AEFP)

2025: Association for Public Policy Analysis and Management (APPAM)

2024: Association for Public Policy Analysis and Management (APPAM); Association for Education Finance and Policy (AEFP); Public Finance and Budgeting Northeastern Workshop

2023: Association for Public Policy Analysis and Management (APPAM)

GRANTS & AWARDS

First Place, Graduate Student Poster Session Center for Policy Research, Syracuse University	2026
Summer Dissertation Fellowship Syracuse University	
Ph.D. Department Research Grant Syracuse University	2025
Financial Inclusion Essay Award National Banking and Securities Commission	2021

SERVICE

Graduate Student Representative Center for Policy Research, Syracuse University	2026 – 2027
Ad Hoc Referee: <i>Educational Researcher, Journal of Behavioral Public Administration</i>	

TECHNICAL SKILLS

Statistical software: Stata, R, QGIS, Python
