The Impacts of High-Intensity Streetlights on Academic Outcomes: Evidence from a Crime Deterrence Experiment

with Amy E. Schwartz

Governments increasingly use place-based interventions to reduce crime, but their consequences for residents, including children, are rarely evaluated beyond crime itself. We study these broader consequences using a 2016 randomized intervention in which the New York Police Department assigned high-intensity streetlights —each emitting 600,000 lumens, four times the brightness of Yankee Stadium’s lights— to high-crime public housing developments. Linking the experimental data to administrative records of public school students and incident-level geocoded crime and arrest data, we find that although exposure to nighttime and daytime index crime, arrests, and incidents involving underage victims fell substantially in high-dose developments, those assigned greater lighting intensity, achievement did not improve on average. This null masks two offsetting patterns. Students in high-rise buildings, where fewer apartments fall within the lights’ reach, gained 0.11 standard deviations in math and 0.10 in reading, while students in low-rise buildings, with a larger fraction of exposed students, lost 0.22 in math, a difference of 0.33 standard deviations. The penalty is largest for the shortest buildings and declines steadily with each additional story. This attenuation with building height is more consistent with direct residential light exposure than with the possibility that students in shorter buildings received smaller crime reductions. The achievement gradient by building height is absent among students living just outside high-dose developments, while no comparable safety gradient by building height appears within them. Instead, consistent with sleep disruption, the losses concentrate among girls at puberty-relevant ages and in math rather than reading. Differences in post-treatment school mobility and school

quality may also account for part of the achievement gradient. A policy can therefore reduce crime while imposing academic costs on the children living closest to it, making its net effect depend on intensity and on how the built environment allocates exposure.

RESEARCH AND PROFESSIONAL EXPERIENCE

Graduate Research Associate, Center for Policy Research

2022 –

Professors Michah W. Rothbart and Amy E. Schwartz

Research Assistant, Center for Competitiveness Studies

2019 – 2022

Professor Guillermo Abdel Musik, ITAM

Investment Consultant, Profuturo Pensiones

2018 – 2019

TEACHING

Syracuse University (Graduate-level)

Quantitative Analysis

Spring 2024, Spring 2025

Public Budgeting

Fall 2022, Summer 2023,
Summer 2024

Guest Lecturer: Education Policy, Quantitative Analysis

Spring 2025

PRESENTATIONS

Upcoming: Urban Economics Association (UEA); NYU Furman Center; Southern Economics Association (SEA);

2026: American Real Estate and Urban Economics Association (AREUEA); FLX Economics of Education Workshop; Capital District Applied Microeconomics Workshop; Association for Education Finance and Policy (AEFP)

2025: Association for Public Policy Analysis and Management (APPAM)

2024: Association for Public Policy Analysis and Management (APPAM); Association for Education Finance and Policy (AEFP); Public Finance and Budgeting Northeastern Workshop

2023: Association for Public Policy Analysis and Management (APPAM)

GRANTS & AWARDS

First Place, Graduate Student Poster Session 2026
Center for Policy Research, Syracuse University

Summer Dissertation Fellowship
Syracuse University

Ph.D. Department Research Grant 2025
Syracuse University

Financial Inclusion Essay Award 2021
National Banking and Securities Commission

SERVICE

Graduate Student Representative 2026 – 2027
Center for Policy Research, Syracuse University

Ad Hoc Referee: *Educational Researcher, Journal of Behavioral Public Administration*

TECHNICAL SKILLS

Statistical software: Stata, R, QGIS, Python
